## Ultra-Build Epoxy Lining Systems

### DESCRIPTION

Through 20 years of testing and applying epoxies in various applications, Citadel's engineering team has developed a broad range of epoxy systems that can be tailored to your specific needs.

All of our epoxies are easy to apply, are great for long term durability, and contain no VOCs.

Our most popular products are the SLS-30™ and SLS-300™ products:

SLS-30™ is a two component, 100% solids epoxy system. It provides both a structural, cured-in-place lining and a chemical protective barrier in one quick application. It is commonly used in waste collection systems, sewers, lift stations, tanks, vaults and cooling lines.

SLS-300™ is a one step, low cost flexible sealant with excellent bonding properties that can be applied to damp or wet substrates. It is commonly used for manhole and catch basin grade rings and joints, but is also used in a variety of situations where shifts and movement may occur.

### PRODUCT LINES

- SLS-10™ Monolithic Liner for New Pipe
- SLS-20™ Low Cost Rehab Liner for Manholes
- SLS-30™ Structural Liner
- SLS-35™ Super Fast Patching Compound
- SLS-40™ Potable Water Liner
- SLS-50™ High Strength Structural Liner
- SLS-60™ Strong Acid Liner
- SLS-70™ High Temp Liner
- SLS-80™ Solvent Resistant Liner
- SLS-90™ Monolithic Encapsulation
- SLS-300™ Solid Epoxy Coating
- SLS-350™ Solid Epoxy Coating

***SLS Approved by LA County, City of Los Angeles.***
